Findings

HIGH

Category pages load hero images without size hints

Images on category pages have no width and height, so the layout shifts while they load.

Set width and height on every hero image and serve them as AVIF.

MEDIUM

212 URLs return a redirect chain

Old product URLs redirect twice before reaching the current page.

Point each old URL directly at its final target.

About this report

Generated with the renderreport CLI from examples/requests/health-check-themed.json: the health check request plus a theme block.
